This page contains reports which are in some way special or interesting. Unusual or strange propagation effects, for example.

Doppler shift

21-Mar-06 12:20Z: Unusual propagation conditions allowed by Beacon at [VKEDJ](#) to transmit. My signal

Reception in unusual circumstances!

26-Mar-06 12:02Z: Andrew [WOHK](#) did some QRSS'ing and [SOTEs at his expedition](#) at 1368m asl on the top of [some more here](#)

Sudden opening and closing of propagation paths

23-Mar-06 19:00Z: This [interesting report](#) from [Pablo](#) shows how the propagation sometimes just ends really

23-Mar-06 19:25Z: A few [WOHK](#) es started at the same event.

18-Mar-06 08:50Z: Another [LA5VNA](#) report from Steve. This one shows the path opening early in the morning.

Remote Internet Reception

[Andrea Borgnino IW0HK](#) reported an interesting way to enjoy QRSS monitoring from the comfort of your office! When you can't be at home in the shack, no problem you can still do something in your workplace. There are variety of remotely controlled receivers on the internet and it is possible to monitor the audio streams from these using a local copy of Argo (or similar QRSS software) installed on your computer. Some example receivers Andrea mentioned are:

<http://www.radio.rai.it/webradio/index.cfm> : an Icom PCR-1000 in Rome

<http://dl7pz.dtdns.net/java.html> : web java receiver of DL7PZ in Berlin

<http://www.dxtuners.com> : DX Tuners; links to many remote receivers (free membership required).

05-Apr-06 13:12Z: [Andrea IW0HK](#) received this one remotely using an ICOM-R-75 located in Sweden.

05-Apr-06 14:19Z: I installed [Remote Receiver](#) and copied my notes to the net. This is my first ever QRS

05-Apr-06 14:16Z: Chris [DL6JAN](#) also observed me increasing the amount of FSK shift at the same time.

QRSS at sea!
